NEW! ECM Motor Option

This new ECM motor option includes 24V controls, a constant torque, permanent magnet, brushless DC motor, with 4 discrete speed taps that allow for precise air balancing.

Standard Features

Basic Unit - All fan coils are manufactured with heavy gauge galvanized steel to resist corrosion. All models are approved for installation with "0" clearance to combustible material.

Insulation - Plenums and cabinets are insulated with Tuf-Skin dual density fiber glass blanket insulation with an anti-microbial agent.

Ceiling Panels - Hinged access/return panels are manufactured with heavy gauge galvanized steel with captive mounting screws and an attractive white baked powder finish.

Condensate Pans - Positive sloped drain pans are galvanized steel, coated on the inside surface with a U.L. Listed closed cell, fire retardant, foam insulation. Pan includes both primary and secondary drain connections.

Return Air Plenums - Return air plenums are manufactured from galvanized steel insulated with Tuf-Skin dual density fiber glass blanket insulation and a 1" TA fiber glass filter.

Coils - Constructed with seamless copper tubes and headers. The tubes are mechanically expanded into corrugated aluminum fin material for a permanent primary to secondary surface bond. Coils are tested under water at 350 PSI for operation at 300 PSI. Coils include manual air vents.

Fan Wheels-Housing - are double width, double inlet (DWDI) forward curved, centrifugal type. Wheels are statically and dynamically balanced for smooth, quiet operation. The housing is constructed from heavy gauge galvanized steel with die-formed inlet cones.

Motors - Standard motors are PSC, permanently lubricated type with internal thermal overload protection.

Options

Factory mounted options include ECM motors 120V only, stainless steel drain pans, foil faced cabinet insulation, Multi-24 3-speed 24V control, valve packages, thermostats, aqua stats, service switches. 120V, 208V/240V, 277V, 60hz and (220/50hz, PSC MOTORS ONLY)

*HBC(X) Series - Ceiling Concealed

The * HBC series is designed for fully concealed applications. This 10" high space saving unit provides easy access for service and maintenance.

*PHBC(X) Series - Ceiling Concealed with Plenum

The * HBC series is designed for fully concealed applications. This 10" high space saving unit provides easy access for service and maintenance.

*RHBC(X) Series - Ceiling Recessed

includes adjustable hinged access/return panel with 1" TA fiber glass filter. The cabinet allows for a field mounted rear return duct connection by using a solid access panel.

*CHBC(X) Series - Ceiling Recessed

cabinet with an attractive baked powder finish. Cabinet includes stamped discharge opening and hinged bottom panel with 1" TA fiber glass filter.

PSC MOTOR

- Notes:**
1. Motors are 120v/60Hz, high efficiency PSC type
 2. Maximum HACR breaker is 15 amp
 3. Coil fins-per-inch varies to allow consistent air flow
 4. (4) The size 3 motor (models 3(P/R/C)(HBC) may not start on low speed due to low starting torque. These units must be wired to start on either Medium or High speed.

PSC MOTOR

- Notes:**
- Motors are 220v / 50Hz, high efficiency PSC type
 - Maximum HACR breaker is 15 amp
 - coil fins-per-inch varies to allow consistent air flow

PSC MOTOR

- Notes:**
1. Motors are 220v / 50Hz, high efficiency PSC type
 2. Maximum HACR breaker is 15 amp
 3. coil fins-per-inch varies to allow consistent air flow

1.03 SUBMITTALS

A. Shop drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, and electrical characteristics and connection requirements. A computer generated capacity selection shall be submitted for each cooling coil with design points and final operating point clearly noted.

B. Product Data:

1. Provide literature that indicates dimensions, weights, capacities, ratings, fan performance, finishes of materials, and electrical characteristics and connection requirements.

2. Provide data of filter media, filter performance data.

3. Manufacturer's installation instructions.

1.04 OPERATION AND MAINTENANCE DATA

A. Maintenance Data: Include instructions for lubrication, filter replacement and motor and drive replacement.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing the products specified in this section with a minimum 10 years documented experience, which issues complete catalog data on total product.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Accept products on site on factory-installed shipping skids. Inspect for damage.

B. Store in clean dry place and protect from weather and construction traffic. Handle carefully to avoid damage to components, enclosures, and finish.

GUIDE SPECIFICATIONS (cont.)**1.07 ENVIRONMENTAL REQUIREMENTS**

A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, and fan has been test run under observation.

PART 2: PRODUCTS**2.01 MANUFACTURERS**

A. The following manufacturers are approved for use. No substitutions will be permitted.

1. First Company, Dallas TX

2.02 CASING

A. Unit shall have corrosion resistant casing consisting of galvanized steel panels. Unit panels shall be fully insulated with 1.5lb fiberglass insulation with anti-microbial agent. Removable panels shall provide full access to unit components.

B. Drain pans shall be heavy gauge galvanized steel with an insulating coating. Optional stainless steel drain pan shall include an insulating coating. Drain pans shall be removable for cleaning or replacement without removing coils or disturbing coil connections.

2.03 SUPPLY FAN

A. Provide DWDI forward-curved supply fans. Fan assemblies shall be statically and dynamically balanced by manufacturer. The housings are constructed from heavy gauge galvanized steel with die-formed inlet cones.

B. Fan and motor mounting platform shall be a minimum of 12 gauge LFQ galvanized steel.

2.04 MOTORS

A. Direct drive motors to be PSC or ECM type, permanently lubricated type with internal thermal overload protection and mounted with rubber isolation bushings.

2.05 ELECTRICAL

A. Provide units with 115, 208-230, or 277V, 3-speed with 24v control transformer, and 15 amp service switch or optional ECM motor with 120/24V control transformer, 15 amp service switch, 4 speed taps. Controls to be factory mounted and tested.

2.07 COOLING AND HEATING COIL SECTIONS

A. Provide access to coils for service and cleaning.

B. Water Coils: fins shall have full drawn collars to provide a continuous surface cover over the entire tube for maximum heat transfer. Tubes shall be mechanically expanded into the fins to provide a continuous primary-to-secondary compression bond over the entire finned length for maximum heat transfer rates. Bare copper tube shall not be visible between fins. Coil tubes shall be seamless copper, expanded into fins, and brazed at joints. Coil connections shall be copper with sweat connection size to be determined by manufacturer based upon the most efficient coil circuiting. Manual air vent connections shall be provided at the highest point to assure proper venting. Coils shall be tested with 350 pounds air pressure and suitable for 300 psig working pressure. Coil casings shall be a formed channel frame of galvanized steel.

2.08 FILTERS

A. Filter to be disposable type and media shall be UL 900 listed, Class I or Class II.

PART 3: EXECUTION**3.01 INSTALLATION**

A. Install in accordance with manufacturer's instructions.
